Descriptive Statistics IV

CLEMSON UNIVERSITY

Percentiles and Quartiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.1

Notes

Agenda

- 1 Percentiles and Quartiles
- 2 Boxplots
- 3 Z-scores & Empirical Rule
- 4 Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

Descriptive Statistics IV

CLEMSON UNIVERSITY

Percentiles and Quartiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.2

Notes

Percentiles

- The p_{th} percentile is a value such that at least $p\%$ of the data set is less than or equal to this value
- Calculation of percentiles using the indexing method:
 - Sort the set of numbers in an increasing order
 - For the p_{th} percentile, compute the index $i = \frac{np}{100}$ where n is the sample size
 - If i is an integer then p_{th} percentile is the average of i_{th} value and $(i + 1)_{th}$ value, otherwise take the $(i + 1)_{th}$ value
- Quartiles:
 - Q1: first quartile
 - M (Q2): median (second quartile)
 - Q3: third quartile
 - Interquartile range or IQR: $Q3 - Q1$

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.3

Notes

Example

Find Q_1 , M , Q_3 and IQR of the following list of values: 13, 18, 13, 14, 13, 16, 14, 21, 13 using the indexing method

- ➊ Order the data first: 13, 13, 13, 13, 14, 14, 16, 18, 21
- ➋ Find the sample size n and compute the indices for $p = 25, 50, 75$
- ➌ $n = 9 \Rightarrow$ the indices are 3, 5, 7 $\Rightarrow Q_1 = 13, M = 14, Q_3 = 16$
- ➍ $IQR = Q_3 - Q_1 = 16 - 13 = 3$

Descriptive Statistics IV

CLEMSON UNIVERSITY

Percentiles and Quantiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.4

Notes

Steps to Making a Boxplot

- ➊ Find Q_1 , M , Q_3 and draw a box from Q_1 to Q_3 . Add a vertical line inside the box at M
- ➋ Compute the value of Lower Fence (LF) $= Q_1 - 1.5IQR$ and the Upper Fence (UF) $= Q_3 + 1.5IQR$. Find the largest value \leq UF and the smallest value \geq LF. Draw whiskers go from Q_1 , Q_3 to these two values
- ➌ Plot the individual outlier(s) (i.e., the values either $> UF$ or $< LF$)

Percentiles and Quantiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.5

Notes

Boxplot

- ➊ Ordered data values: 13, 13, 13, 13, 14, 14, 16, 18, 21
- ➋ $IQR = 16 - 13 = 3 \Rightarrow LF = 13 - 1.5 \times 3 = 8.5; UF = 16 + 1.5 \times 3 = 20.5$

Percentiles and Quantiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.6

Notes

Example

Suppose we have the following list of values: 13, 18, 13, 14, 13, 16, 14, 21, 13, 9, 27, 18, 25, 20, 6

- Find the 35th percentile
 - Sort the data:
6, 9, 13, 13, 13, 13, 14, 14, 16, 18, 18, 20, 21, 25, 27
 - Compute the index value $i = \frac{35 \times 15}{100} = 5.25 \Rightarrow$ the 35th percentile is 13
- Find the 65th percentile
 - Sort the data:
6, 9, 13, 13, 13, 13, 14, 14, 16, 18, 18, 20, 21, 25, 27
 - Compute the index value $i = \frac{65 \times 15}{100} = 9.75 \Rightarrow$ the 65th percentile is 18

Descriptive Statistics IV

CLEMSON UNIVERSITY

Percentiles and Quartiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.7

Notes

Z-scores & Empirical Rule

- Z-score:
$$z = \frac{x - \bar{x}}{s},$$
when x is the value of an individual observation, \bar{x} sample mean, and s sample standard deviation
- Measuring "how far" (in terms of standard deviations) an observation is from its mean (e.g., 3 standard deviations above the mean value)
- Empirical Rule:** If a data set **can be well approximated by a normal curve (bell-shaped with light tails)**, then approximately **68%, 95%, and 99.7%** of the observations are within **1, 2, and 3 standard deviations** of the mean

Percentiles and Quartiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.8

Notes

Norm (Bell-Shaped) Curve

Descriptive Statistics IV

CLEMSON UNIVERSITY

Percentiles and Quartiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.9

Notes

Visualizing Time Series Data

Descriptive Statistics IV

CLEMSON UNIVERSITY

Percentiles and Quartiles

Boxplots

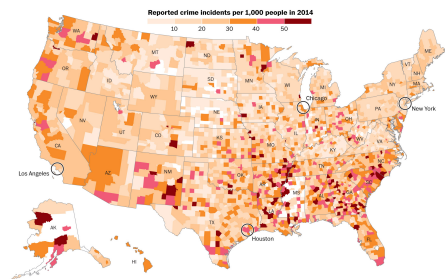

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.10

Notes

Visualizing Cross-Sectional Data

Descriptive Statistics IV

CLEMSON UNIVERSITY

Percentiles and Quartiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.11

Notes

Visualizing Spatio-Temporal Data

Descriptive Statistics IV

CLEMSON UNIVERSITY

Percentiles and Quartiles

Boxplots

Z-scores & Empirical Rule

Visualizing Time Series, Cross-Sectional, and Spatio-Temporal Data sets

6.12

Notes

Summary

- In this lecture, we learned
- Percentiles and Quartiles
 - How to construct a Boxplot
 - Z-scores & Empirical Rule
 - How to visualize time series, cross-sectional, spatio-temporal data sets
- We will talk about Probability in next three weeks
