Quantitative and
Qualitative Predictors

Polynomial Regression

Multiple Linear Regression

$$Y = \beta_0 + \beta_1 X_1 + \beta_2 X_2 + \dots + \beta_{p-1} X_{p-1} + \varepsilon, \quad \varepsilon \sim \mathcal{N}(0, \sigma^2)$$

 $X_1, X_2, \cdots, X_{p-1}$ are the predictors.

Question: What if some of the predictors are qualitative (categorical) variables?

 \Rightarrow We will need to create **dummy (indicator) variables** for those categorical variables

Example: We can encode Gender into 1 (Female) and 0 (Male)

The 2008-09 nine-month academic salary for Assistant Professors, Associate Professors and Professors in a college in the U.S. The data were collected as part of the on-going effort of the college's administration to monitor salary differences between male and female faculty members.

We are three categorical variables, namely, rank, discipline, and sex.

Regression with Quantitative and Qualitative Predictors & Polynomial Regression

Quantitative and Qualitative Predictors

Polynomial Regi

For binary categorical variables:

$$X_{\text{sex}} = \begin{cases} 0 & \text{if sex = male,} \\ 1 & \text{if sex = female.} \end{cases}$$

$$X_{\text{discip}} = \begin{cases} 0 & \text{if discip} = \mathbf{A}, \\ 1 & \text{if discip} = \mathbf{B}. \end{cases}$$

For categorical variable with more than two categories:

$$X_{\mathrm{rank1}} = \begin{cases} 0 & \text{if } \mathrm{rank} = \mathrm{Assistant} \ \mathrm{Prof}, \\ 1 & \text{if } \mathrm{rank} = \mathrm{Associated} \ \mathrm{Prof}. \end{cases}$$

$$X_{\mathrm{rank2}} = \begin{cases} 0 & \text{if } \mathrm{rank} = \mathrm{Associated\ Prof}, \\ 1 & \text{if } \mathrm{rank} = \mathrm{Full\ Prof}. \end{cases}$$

Regression with Quantitative and Qualitative Predictors & Polynomial Regression

Regression with Both Quantitative and Qualitative Predictors

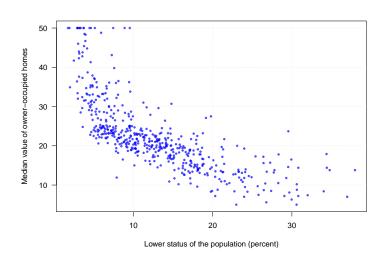

$$Y_i = \beta_0 + \beta_1 X_i + \beta_2 X_i^2 + \dots + \beta_p X_i^p + \varepsilon$$

Quantitative and Qualitative Predictors

We can treat polynomial regression as a special case of multiple linear regression. In specific, the design matrix takes the following form:

$$\boldsymbol{X} = \begin{pmatrix} 1 & X_1 & X_1^2 & \cdots & X_1^p \\ 1 & X_2 & X_2^2 & \cdots & X_2^p \\ \vdots & \cdots & \ddots & \vdots & \vdots \\ 1 & X_n & X_n^2 & \cdots & X_n^p \end{pmatrix}$$
