

STAT 8020 R Lab 10: Interpolation of Spatial Data

your name here

Contents

1. Load the data into R. How many observations are in this spatial data set?

Code:

```
load("RLab10.RData")
```

Answer:

2. Plot the spatial data.

Code:

3. Plot the spatial variogram and briefly describe your findings.

Code:

Answer:

4. Fit a Spatial Gaussian process model to the data. Describe the models for the mean function and the covariance function, and report the estimated parameters.

Code:

Answer:

5. Produce the spatial interpolated map with its associated estimation uncertainty.

Code:

Answer:
